

REMARKS

In the specification, a new section was added to include cross-reference to related applications information. Three section headings were replaced or added for improved organization of the specification and for consistency with section headings commonly used in U.S. patent applications. Nine paragraphs were replaced or added to correct minor reference errors and to improve readability. No new matter has been introduced.

A new abstract has been presented to ensure that the abstract published for the underlying PCT application becomes the abstract of record for this national stage application.

Claims 1-20 remain in this application. Claims 13-20 have been added.

The Applicant respectfully requests entry of the amendments presented in this paper.

Respectfully submitted,

J. Douglas Wells
